

The shot storyboard

Scene 1:

- Duration: 00:00 to 00:04
- Used prompts:
 - Positive Prompt: Pristine and beautiful historic Amsterdam before pollution, vibrant green trees lining canal banks, lush vegetation, crystal-clear blue canal water reflecting classic Dutch golden age architecture, bright healthy atmosphere, local residents peacefully enjoying sunny daylight, sitting by the water and strolling along the clean cobblestone paths. Smooth cinematic camera movement starting from eye-level perspective gradually ascending upward into the sky, revealing an ascending wide bird's-eye view shot of the lush green nature, pristine canals, and historic brick buildings, high quality, cinematic lighting, 8k resolution, highly detailed, fluid continuous motion.
 - Negative Prompt: Pollution, plastic, litter, garbage, dark atmosphere, static camera, abrupt jump cuts, low resolution, blurry, distorted architecture, glitchy motion, noise, artifacts, overcast sky.
- Personal description:

A peaceful view of a clean Amsterdam canal with clear water and green trees, showing what the city looks like before plastic pollution takes over.

- A frame from the shot:

Scene 2:

- Duration: 00:04 to 00:08
- Used prompts:
 - Positive Prompt: Close focus on early urban pollution scattered on the ground, used plastic water bottles, crumpled food wrappers, cigarette butts, and discarded trash on historic Dutch cobblestones next to a canal. Suddenly, a powerful gust of strong wind blows across the scene, lifting the trash off the ground. The camera maintains its original camera height and smoothly pans in the direction where the trash is flying, tracking the movement as the plastic bottles, wrappers, and debris fly away gradually into the air, dynamic wind motion, daylight lighting, photorealistic physics, highly detailed textures.

- Negative Prompt: Clean street, pristine environment, rising camera, falling camera, static trash, abrupt camera jerks, low resolution, morphing objects, extra limbs, blur, video noise, indoor setting.
- Personal description:
A close-up look at trash like plastic bottles and wrappers left carelessly on a historic Amsterdam street.
- A frame from the shot:

Scene 3:

- Duration: 00:08 to 00:11
- Used prompts:
 - Positive Prompt: The plastic trash and debris blown by the strong wind fly into the frame and stack up next to growing piles of garbage along the historic Amsterdam canal. Used plastic bottles, wrappers, bags, and discarded waste pile up into dirty heaps on the cobblestone sidewalk

right next to murky, polluted canal water. Loose plastic bags and trash float gently on the water's surface while wind continues to blow debris across the ground, gritty photorealistic realism, detailed plastic textures, dramatic lighting, seamless fluid motion, dynamic camera view.

- Negative Prompt: Clean canal, pristine street, pristine buildings, missing trash, levitating objects, static scene, low detail, cartoon visual style, blurry motion, video artifacts.
- Personal description:
Wind blows loose garbage and plastic waste so that it piles up high against the edges of the canal and walkways.
- A frame from the shot:

Scene 4:

- Duration: 00:11 to 00:15
- Used prompts:

- Positive Prompt: A growing ball formed from compressed plastic trash, plastic bottles, waste, and debris rolling forward down a narrow historic Dutch street under bright daylight. Strong wind continues blowing, with loose trash and plastic bags flying everywhere around the scene. Cinematic tracking camera capture: the camera starts focusing on the ball when it is small, continuously recording its rolling motion down the cobblestone street while capturing how big it gradually gets as it absorbs more waste. Dynamic object physics, flying plastic, historic brick building facades, realistic sunlight, hyper-detailed textures, continuous fluid movement.
- Negative Prompt: Stationary ball, clean streets, nighttime, dark lighting, smooth unnatural rolling, low quality, visual glitches, static air, missing wind, floating objects.
- Personal description:
A massive, scary ball made of compressed plastic waste starts rolling heavily down a narrow street in Amsterdam.

- A frame from the shot:

Scene 5:

- Duration: 00:15 to 00:18
- Used prompts:
 - Positive Prompt: High perspective camera view shot looking down at the rolling plastic trash ball in Amsterdam. The trash sphere is now a lot bigger, continuously rolling and getting even bigger, aggressively crushing into objects, smashing parked cars, collapsing brick walls, and destructing historic Amsterdam buildings in its path. Flying plastic debris, shattered glass, and brick dust explode outward. Dynamic wide high-angle camera shot, dramatic urban destruction, epic scale, photorealistic physics, highly detailed debris, realistic daylight lighting.

- Negative Prompt: Low angle view, eye-level camera, small ball, intact undamaged buildings, undamaged cars, clean streets, static camera, cartoon physics, blurry texture, motion flicker.
- Personal description:
The giant ball of trash grows even bigger and wider, moving fast and crushing cars and street objects in its path.
- A frame from the shot:

Scene 6:

- Duration: 00:18 to 00:21
- Used prompts:
 - Positive Prompt: A gigantic trash ball rolling through destruction-filled historic streets of Amsterdam. Terrified local residents and tourists run away in panic; some people manage to escape around corners while others who do not make it are getting sucked directly into the sticky mass

of the rolling debris ball. The ball is still actively rolling forward, and the severe damage it caused to buildings, smashed cars, and street objects is clearly visible all around. Intense cinematic motion, emotional dramatic realism, dynamic crowd panic, detailed destruction, photorealistic physics.

- Negative Prompt: Calm crowd, standing still people, small ball size, undamaged buildings, intact cars, peaceful atmosphere, low resolution, stiff motion, visual artifacts.
- Personal description:
The towering garbage ball smashes right into Amsterdam canal houses, causing massive destruction while people try to run away.
- A frame from the shot:

Scene 7:

- Duration: 00:21 to 00:25

- Used prompts:
 - Positive Prompt: Cinematic sky view camera shot from high altitude looking straight down at the ruined aftermath of destroyed Amsterdam. Widespread destruction visible across the urban environment, showing severely damaged and destroyed historic Amsterdam buildings with collapsed roofs, crumbled brick facades, crushed vehicles, and streets completely covered in thick layers of plastic pollution and garbage. Overcast pale daylight illuminating the ruined landscape, wide aerial vista, environmental disaster visual, ultra-detailed textures, atmospheric haze, 8k resolution, static atmospheric shot.
 - Negative Prompt: Ground level camera, eye-level view, intact buildings, clean streets, green pristine nature, bright cheerful atmosphere, low quality, blur, distortion, cartoon styling.
- Personal description:

A serious final drone view looking down at the ruined city blocks, sending an urgent warning about the dangers of plastic pollution.
- A frame from the shot:
